

APPIAN ACCELERATOR **FOR FAST RESULTS**

Patients are demanding more transparency and control of their patient information and increasingly want to be able to access this information directly. Bits In Glass' Manage My Care (MMC) application provides a patient portal that leverages emerging norms around self-service that enhance user experience and enable better communication between patients and care providers. The clinician portal of the application provides care teams with real-time access to the patient's continuum of care, cohort data, and more.

WHAT IS AN APPIAN ACCELERATOR?

An Appian Accelerator is an application that covers the core functionality for a particular business function. It provides Appian customers with a "running head start" so they can expect to complete their Appian implementation in much less time than starting from scratch. Appian Accelerators reduce risk, reduce implementation timelines and delivery applications that deliver ROI faster.

The best part about Appian Accelerators is that customers can still overlay their specific business needs or "secret sauce" on top of an Appian Accelerator by working with our team of domain experts and Appian technical consultants.

MANAGE MY CARE APPLICATION

With Manage My Care, patients and care teams have better insight into and access with instant reminders, event notifications, and alerts that support a proactive approach to requesting information from patients as needed. The application also flags important incidents and data for care providers to review and respond to as needed. Manage My Care helps healthcare organizations improve patient care by implementing individualized health care for all their patients, providing better alignment to their overall treatment plan.

ACCELERATOR BENEFITS & FEATURES

Benefits

Divided into two major areas, the Patient Portal and Provider Portal:

- ◆ Address current patient demands for more transparency and control
- ◆ Provide real-time insights to the patient and care teams
- ◆ Secure communications ensure timely and relevant decisions based on current data
- ◆ Improves chronic disease management and manages care for single patients or as a cohort

Features & Functionality

Patient Portal

- ◆ Submit quantitative information like blood pressure, weight, pulse, fluid intake and output, and any other qualitative measures
- ◆ Capture qualitative information like long-term health plans, life goals, and symptom assessment for indicators such as anxiety, energy, and pain
- ◆ Review previously submitted information for long-term review and lifestyle planning
- ◆ Raise concerns for care provider review immediately or during the next meeting about any piece of submitted information

Provider Portal

- ◆ View all submitted patient information including a comparative visualization against population data (ie: comparing an individual's results against other patients)
- ◆ View patient-specific event history to highlight new events for a specific patient or for all patients assigned to any given facility
- ◆ ... and more!
