

What is intelligent automation?

We all have dull, repetitive, and time consuming tasks we don't enjoy. Whether it's data entry or reviewing daily logs, we want to spend our time on work that engages us at a higher level.

MEET THE DIGITAL WORKFORCE

Intelligent automation uses software robots, or digital workers, to complete these tasks the same way a human would, in much less time.

Why you need intelligent automation

EFFICIENCY

Digital workers don't need downtime. They're always ready to work on your boring back-office tasks 24 hours a day; even when you're catching some zzz's.

INTELLIGENCE

Digital workers can see, think, and hear. They're able to solve complex logic, business, and system problems without human intervention.

CONTROL

Blue Prism's Robotic Operating Model (ROM) is secure and scalable, allowing you to adjust capacity which increases efficiency, reduces costs, and lowers risks.

TECHNOLOGY ALLIANCE

Blue Prism's world-class partner ecosystem ensures you've got the right expertise at your fingertips.
